

# Sporting Event Security

Large sporting events are high-risk targets for malicious radiation threats.

- Fans carrying sources into stadium
- Sources placed in high traffic areas
- Vehicles in motion armed with radioactive devices

**P** **Thermo Scientific™ PackEye™ Radiation Detection Backpack** - baseline scanning prior and game time comparison

- Parking lot
- Within stadium
- Monitoring the grounds

**S** **Thermo Scientific™ RadEye SPRD™ Spectroscopic Personal Radiation Detector** - police officers wearing as primary means of locating source as they walk the event

**R** **Thermo Scientific™ RadHalo™ RDP Area Monitor** - screening fans as they enter the stadium

**V** **Thermo Scientific™ ViewPoint™ Enterprise Remote Monitoring** - command and control software to monitor all devices

**M** **Thermo Scientific™ Mobile ARIS™** - Baseline monitoring prior and scanning traffic in target area during event

**G** **Thermo Scientific™ Gemini™ Bulk Material Identifier** - Positively ID suspicious material with comprehensive and conformatory results in a single, portable device

*“We are able to maintain the flow of traffic by eliminating the distraction of false alarms as the RadEye immediately and automatically identifies the type of radiation causing an alarm and lets me know when it is something to be concerned about and not someone who just had a medical treatment.”*
