

Quality controls

Thermo Scientific™ Auto-Connectivity software

Gain real-time QC insights with Auto-Connectivity software for Thermo Scientific™ LabLink™ 360 quality control software. Instantly capture and view instrument and peer data.

Hands-free and real-time

Enables instant, fully automated QC data transfers from your instruments to LabLink 360 QC software, eliminating manual entry and boosting your lab's productivity and reliability.

Minimal setup and integration

Auto-Connectivity software can be set up within hours, seamlessly integrating with most clinical instruments and existing lab IT configurations. Guided setup enables quick onboarding to peer groups.

Results-based troubleshooting

Immediate access to internal and global peer comparison data ensures faster decisions and troubleshooting support, driven by real-time performance metrics—all within a secure platform.

Transform your lab with auto-connectivity

Thermo Fisher's Auto-Connectivity solution is revolutionizing laboratory operations by delivering enhanced efficiency, accuracy, and ease of use.

Do more, with less steps

More confidence & productivity.

Automation reduces human error, ensures data integrity, and streamlines processes so staff can focus on critical work

Cost reduction. Fewer manual steps and fewer errors help reduce labor costs and eliminate wasted time on corrections and rework

Reliable, real-time insights

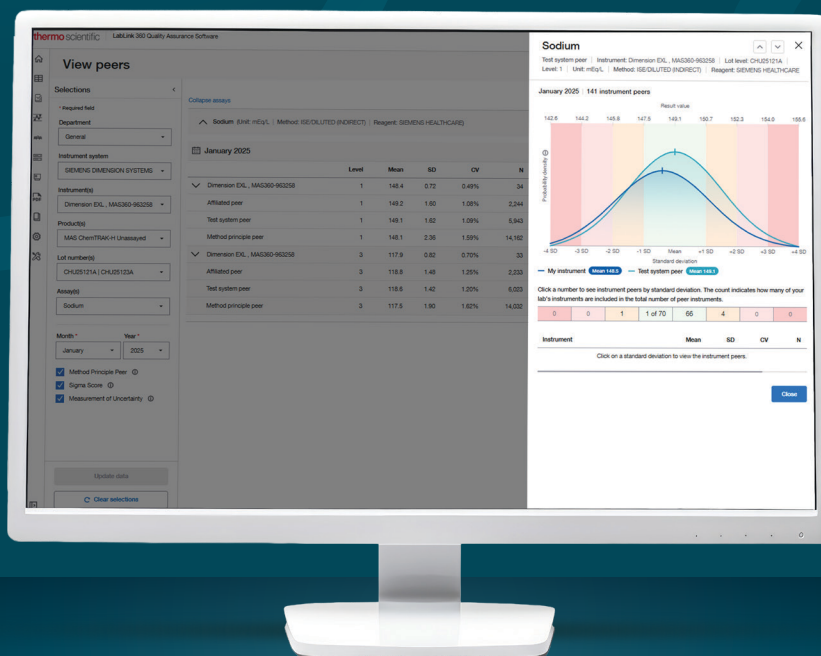

Instant access. Auto-Connectivity software ensures immediate access to both internal and peer data, enabling swift data-driven decisions

Faster troubleshooting. With peer comparison data, laboratories can access critical performance metrics such as Westgard Rules and Sigma Score, enabling faster troubleshooting and more reliable QC results

Easy setup and expansion

Seamless integration. Installation specialists get you up and running within hours, and the software connects smoothly with a wide range of instruments and existing lab systems

Build for growth. The software scales as your lab expands—adding instruments, data points, or QC products is simple through the user-friendly interface
